

## AR007 Throttle Bracket Kit for Hemi single 4bbl

This kit is designed to work with a Holley carburetor as shown. For a Carter or Edelbrock carburetor, the throttle bracket might need to be bent slightly in order to line up properly with the throttle lever. The throttle lever on Edelbrock carburetors may need to be reamed out slightly for the new throttle stud.

The picture above shows an AR Engineering throttle return bracket kit with dual springs. This throttle return kit is available as part number AR085. You should be able to purchase this throttle return kit from the same vendor where you purchased the throttle bracket kit.

Install the throttle bracket per the factory service manual and follow its torque specifications for the manifold bolts. Re-install the throttle cable and adjust per the factory service manual instructions. Throttle cables of various lengths are still available new from any Dodge dealer if your existing cable no longer works. The tab on the throttle bracket can be used to hold a Lokar type kickdown cable for an automatic transmission if desired.
